About This Chart

What to look for

- **High median** — This product consistently costs more per pound to ship.
- **Tall box (wide IQR)** — Rates are inconsistent across loads. May indicate multiple carriers, lanes, or a rate that hasn't been locked in.
- **Outlier dot above the whisker** — One load was charged well above the normal range. Review that BL for surcharges or mis-keyed freight.
- **Outlier dot below the whisker** — Unusually cheap load. Could be a back-haul rate, credit, or data entry error.

How to read each box

- **Box edges** — Q1 (25th percentile) to Q3 (75th percentile). The middle 50% of all loads for that product.
- **Center line** — Median ¢/lb. Half of loads cost less, half cost more.
- **Whiskers** — Extend to the farthest actual load still within 1.5× the box height (IQR) from each edge.
- **Dots** — Individual loads beyond the whiskers. Statistically unusual rates.

Products sorted left → right by median ¢/lb (cheapest to most expensive).

Formula

```
¢/lb = Unit_Freight (already in ¢/lb)
Unit_Freight = freight cost ($) ÷ pick weight (lbs)
```

Source

Warship database (AMJK · SW · Jan 1 – today). Top 50 product codes by total shipped weight YTD. Each data point = one truck load (BL Number).

Disclaimer:

Rates are derived from IPG-EZ Report freight cost ÷ pick weight. Outliers may reflect small loads, special handling, or data entry errors.

Box plots show statistical distribution — they do not imply that high-cost loads are errors. Outliers may reflect legitimate factors such as small loads, special handling, or remote delivery points. Confirm context before acting on any single data point.

Staff & Hours

HEADCOUNT

- 1 Supervisor
- 1 Asst. Supervisor
- 2 Office Staff
- 1 Warehouse Lead
- 6 Forklift Drivers

WORK HOURS · WAREHOUSE

- Monday – Friday
- Day: 7:00AM – 3:30PM
